Newly Added Functions

Achieving true power analysis

DC, 0.1Hz to 2 MHz frequency bandwidth Obtain even greater accuracy in high-frequency power measurements with the aid of Hioki's current sensor phase shift function

A wide frequency range is required for power measurement due to the acceleration of switching devices, especially SiC. High accuracy, broadband, and high stability. The PW6001's world-class technology-based fundamental performance makes in-depth power analysis a reality.

±0.02%* basic accuracy for power Strengthened resistance to noise and temperature fluctuations in the absolute pursuit of measurement stability

The custom-shaped solid shield made completely of finely finished metal and optical isolation devices used to maintain sufficient creepage distance from the input terminals dramatically improve noise resistance, provide optimal stability, and achieve a CMRR performance of 80 dB/100 kHz. Add the superior temperature characteristics of ±0.01%/°C and you now have access to a power analyzer that delivers top-of-the-line measurement stability.

*Device accuracy only

Solid shield

Optical isolation device

18-bit resolution, 5 MS/s sampling

Measurements based on sampling theorem are required to perform an accurate power analysis of PWM waveforms. The Hioki PW6001 features direct sampling of input signals at 5 MS/s, resulting in a measurement band of 2 MHz. This enables analysis without aliasing error.

TrueHD 18-bit converter* measures widely fluctuating loads with extreme accuracy

A built-in 18-bit A/D converter provides a broad dynamic range. Even loads with large fluctuations can be shown accurately down to tiny power levels without switching the range. Further, a digital LPF is used to remove unnecessary high-frequency noise, for accurate power analysis.

Conversion efficiency measurement during mode measurement without switching ranges

Achieve lightning fast calculations for 5 independent signal paths at the same time with the Power Analysis Engine II

Calculations for up to five independent signal paths (period detection/broadband power analysis/ harmonic analysis/waveform analysis/FFT analysis) are independently and digitally processed, eliminating any effects one may have on another. Achieve a 10 ms data update speed while maintaining full accuracy through high-speed processing.

* AAF (Anti-aliasing filter): This filter prevents aliasing errors during sampling.

^{*}True HD : True High Definition

Functions and Characteristics

Max Speed 10 ms, Maximum 12 ch* High Accuracy Power Calculation

Data updates in 10 ms to 200 ms. Make high speed calculations while maintaining high accuracy. Achieve measurement stability with original digital filter technology, and measure power after automatically tracking frequency fluctuations from 0.1 Hz.

* Two 6-channel model devices, during synchronized function usage

Simple, high-precision efficiency and loss calculations

When measuring DC/AC converter efficiency, accuracy is required not only for AC but also DC. The basic DC measurement accuracy of the PW6001 is $\pm 0.02\%$, enabling you to make accurate and stable efficiency measurements.

Setting up efficiency calculation formulas for power conditioners and similar equipment is simple on the dedicated screen. Simultaneously display loss and efficiency calculations for a maximum of four systems.

*Device accuracy

Independent harmonic analysis for a maximum of 6 systems (wideband/IEC)

0.1 Hz to 300 kHz fundamental frequency, 1.5 MHz analyzable bandwidth. Comes equipped with IEC61000-4-7-compliant harmonic analysis and up to 100th order wideband harmonic analysis.

Applications

- Motor fundamental wave analysis
- Wireless power transmission waveforms
- Measuring distortion ratio of power conditioner output waveforms

Extensive Current Sensor Lineup Achieve a Combined Basic Accuracy of ±0.04%

Choose the best sensor for your application: the pullthrough type for highly accurate and high current measurements up to 2000 A, the clamp type for quick and easy wire connection, or the direct input type for high accuracy and broadband. Connect a sensor for oscilloscopes for even more options.

PW6001 comes equipped with a sensor power line built-in. Automated recognition functions make setup a cinch.

*±0.075% = accuracy in combination with PW9100

Ver. Large-capacity waveform storage for 3.00 oscilloscope/ PQA-level waveform analysis

Waveform Storage of 1 MWord × (voltage-current 6 ch + Motor Analysis 4 ch). The torque sensor and encoder signals are displayed along with the voltage and current waveforms.

In addition to level triggers, Ver. 3.00 now includes event trigger functions triggered by RMS value and frequency fluctuations. Cursor measurement and waveform zoom functions also render oscilloscopes unnecessary for waveform analysis.

FFT analysis of target waveforms

Analyze frequencies up to 2 MHz across 2 channels. Specify any waveform analysis range you like and view the 10 highest peak values and frequencies. Observe frequency components that do not show up in harmonics and save the measured results.

Ver. Newly Added Functions Ver.3.00

If you already have the PW6001, these functions will be added with the firmware version update (free of charge).

Flat Frequency Characteristics

Frequency characteristics are flat up to 1 MHz even when the power factor is zero. Use together with the Current Sensor Phase Shift Function to make highly accurate low power factor measurements of high-frequency waves. Also ideal for loss assessment of high-frequency transformers and reactors.

* Options to further improve high-frequency wave phase characteristics available Contact us for more information.

D/A Monitor

View up to 8 channels of progressive fluctuations in measured values. Voltage, current, power, frequency and other parameters are updated at the fastest rate of 10 ms, allowing you to observe even the tiniest variations.

Applications

Power conditioner FRT Analysis

Motor Transient State Power Analysis

FRT (Fault Ride Through) : Ability to continue operation despite system disturbance in the power conditioner or similar systems

X-Y Plot

Easily check correlations in measured values for up to two systems simultaneously. Plot physical quantities other than measured values as well by using it together with the user defined calculation function

Applications

- Motor characteristics analysis
- Transformer characteristics analysis

• Power conditioner MPPT Analysis

MPPT: Maximum Power Point Tracker

Current Sensor Phase Shift Function

Our original virtual oversampling technology, evolved. Make phase compensation equivalent to 2 GS/s oscilloscopes a reality while maintaining 5 MS/s 18-bit high resolution. Perform current sensor phase compensation with a 0.01° resolution, and measure power more accurately (Ver. 2.00 and later). With the Current Sensor Phase Shift Function, you can now achieve even more accurate high frequency, low power factor power measurements.

version 03 or later) *Scan the QR code on the right to download a technical brief about

Complex calculation formulas settable on the device

Set equations to compute measurement values any way you want. Enter up to 16 calculation formulas, including functions like sin and log. Calculation results can be used as parameters for other calculation formulas, enabling complex analysis.

Applications

- · Calculate multisystem efficiency and loss with solar power modules and similar equipment
- Calculate Ld.Lq for motor vector control
- Calculate transformer current B and H utilizing Epstein's Method

Supports various power analysis systems

Improved connectivity to PCs over LAN. Remotely operate the PW6001 using a browser from any PC, tablet, or smartphone via the HTTP server function. Acquire files through the network with the FTP server function. LabVIEW driver and MATLAB Toolkit are also available.

* LabVIEW is a registered trademark of NATIONAL INSTRUMENTS MATLAB is a registered trademark of Mathworks, Inc.

Specially designed for current sensors to achieve highly precise measurement

With direct wire connection method

The wiring of the measurement target is routed for connecting to the current input terminal. However, this results in an increase in the effects of wiring resistance and capacitive coupling, and meter loss occurs due to shunt resistance, all of which lead to larger accuracy uncertainty.

Advantages of current sensor method

A current sensor is connected to the wiring on the measurement target. This reduces the effects of wiring and meter loss, allowing measurements with wiring conditions that are close to the actual operating environment for a highly efficient system.

Seamless operability

Simple settings and intuitive operating interface. From Ver. 3.00, a low power factor measurement (LOW PF) mode is included.

Enter handwritten memos on the screen, or use the onscreen keypad

Dual knobs for vertical/ horizontal manipulation of waveforms

One-touch data saving with dedicated key

Quick Configuration screen*

Wiring confirmation function, to avoid wiring mistakes

* A low power factor measurement (LOW PF) mode for easily setting reactor and transformer loss measurement has been added.

Build a 12-channel power meter using "numerical synchronization"

For multi-point measurements, use the numerical synchronization function to transfer power parameters from the slave device to aggregate at the master in realtime, essentially enabling you to build a 12-channel power analysis system

- · Real-time display of slave instrument measurement values on master instrument screen
- · Real-time efficiency and loss calculations between master and slave instruments
- · Save data for 2 units on recording media in master instrument
- Use the slave's measured values on the master's userdefined calculations

Measure phase difference between 2 separate points

Use the waveform synchronization function to measure the phase relationship between 2 points separated by a maximum distance of 500 m. Due to insulation with an optical connection cable, measurement can be performed safely even if the ground potential between the 2 points is not the same.

Wide range of Motor Analysis functions

(Motor Analysis and D/A output model)

Enter signals from torque meters and speed meters to measure motor power. In addition to motor parameters such as motor power and electrical angle, output signals from insolation meters and wind speed meters can also be measured

measur	eu.	-		•
Operating mode		Single	Dual	Independent input
	ch A	Torque	Torque	Voltage/ Pulse
Ø	ch B	Encoder A phase signal	Torque	Voltage/ Pulse
	ch C	Encoder B phase signal	RPM	Pulse
	ch D	Encoder Z phase signal	RPM	Pulse
Measurement targets		Motor x 1	Motor x 2, Motors, transmissions, etc.	Pyranometer/ anemometer and other output signals
Measurement parameters		Electric angle Rotation direction Motor power RPM Torque Slip	Motor power x 2 RPM x 2 Torque x 2 Slip x 2	Voltage × 2 & Pulse × 2 or Pulse × 4

Simply transfer waveforms with "waveform synchronization"

Data sampled at 18 bits and 5 MS/s is sent between instruments in real time*, and the waveform measured by the slave is displayed as-is on the master instrument. This functionality lets you use the power analyzers to measure the voltage phase difference between two remote locations, for example at power substations, manufacturing plants, or railroad facilities.

Display max, 6 channels of waveforms for master and slave

Transfer waveform data for max. 3

- · Real-time display of slave instrument waveforms on master instrument screen
- Harmonic analysis and fundamental wave analysis for master instrument and slave instrument
- · Simultaneously measure waveforms on master device while using the slave to trigger
- D/A output of the slave instrument's waveform from the master instrument
- * For both master instruments and slave instrument, waveform synchronization operates only when there are 3 or more channels. Max. ±5 sampling error.

D/A output waveforms captured 500m away

Transfer voltage/current waveforms taken by the slave instrument located as far as 500m away and output the signals from the master device. When combined with a Hioki MEMORY HiCORDER, timing tests and simultaneous analysis of multiple channels for 3-phase power are possible.

Max. analog 32 channels + logic 32 channels MEMORY HICORDER MR8827

Applications

EV/HEV inverter and motor analysis

*Scan the QR code on the right to download a technical brief about SiC inverter power measurements.

Ver. Calculate transient state power with 3.00 10 ms high accuracy and high speed

Measure power transient states, including motor operations such as starting and accelerating, at 10ms update rates. Automatically measure and keep up with power with fluctuating frequencies, from a minimum of 0.1 Hz. Ver. 3.00 increases the stability of efficiency calculations further by delivering a function to calculate the electric power for one motor cycle.

Even during frequency fluctuations from low to high, the fundamental waveform is automatically pursued. Comes equipped with $\Delta\text{-Y}$ and Y- Δ conversion while calculating with a high degree of accuracy.

Simultaneous measurement of 2 motor powers

The PW6001 is engineered with the industry's first built-in dual mode motor analysis function that delivers the simultaneous analysis of 2 motors. Simultaneous measurement of the motor power for HEV driving and power generation is now possible.

Example of 2 motor measurement

Advanced electrical angle measurement function

Comes equipped with electrical angle measurement necessary for vector control analysis via dq coordination systems as well as high efficiency synchronous motor parameter measurements. Measure voltage and current fundamental wave components based on encoder pulses in real time. In addition, analyze 4 quadrants of torque and rotation through detecting the forward/reverse from A-phasic and B-phasic pulses.

Evaluate inverter motor efficiency and loss

Evaluate efficiency and loss for an inverter, motor, and overall system by simultaneously measuring the inverter's input and output power and the motor's output. You can also create an efficiency map or loss map in MATLAB using measurement results recorded by the PW6001 at each operating point.

*MATLAB is a registered trademark of Mathworks, Inc.

Chopper circuit reactor loss measurement

*Scan the QR code on the right to download a technical brief about reactor loss measurements

Ver High-frequency and low power 3.00 factor device evaluation

Reactors are used for high harmonic current suppression as well as the voltage step up/down of chopper circuits. The PW6001's outstanding high frequency characteristics, highspeed sampling, and noise-suppressing performance are extremely effective in evaluating high-frequency, low power factor devices (reactors, transformers, etc.).

With the addition of a low power factor measurement (LOW PF) mode to the Quick Configuration menu in Ver. 3.00, measurements can now be performed even more quickly.

Harmonic analysis synchronized with switching frequencies

With the PW6001 you can perform harmonic analysis of fundamental waves up to 300 kHz with a band frequency of 1.5 MHz. For reactors used by chopper circuits, measure phase angles and RMS values for the current and voltage of each harmonic order through harmonic analysis synchronized with the switching frequency.

Current Sensor Phase Shift Function

In addition to the PW6001's flat, broad frequency characteristics, sensor phase error compensation allows highly accurate high-frequency and low power factor device analysis.

Circuit impedance analysis

Calculate circuit impedance, resistance, and inductance by using harmonic analysis results and user defined calculations. X-Y plot functions are especially effective for impedance analysis.

- = fundamental frequency voltage / fundamental frequency current Serial resistance RS [Ω]
- = Z × cos (voltage phase angle current phase angle)
 Serial inductance Ls [H]
- = Z × sin (voltage phase angle current phase angle) / (2 × π × frequency)

PV/Wind turbine Power Conditioner (PCS) Efficiency Measurement

Supports PCS-specific measurements

Simultaneously display the necessary parameters for PCS such as efficiency, loss, fundamental wave reactive power Qfnd, DC ripple ratio, three-phrase unbalanced factor, etc. Easily check the required measured items for improved test efficiency. In addition, by setting the DC power sync source to the output AC power channel, you can perform DC output and stable efficiency measurements perfectly synchronized with the output AC.

P4: DC power (panel output) P123: 3-phase power (power conditioner output) Urf4: Ripple rate n1: Conversion efficiency

Uthd1: Voltage total harmonic distortion Uunb123: Unbalance rate Qfnd123: Fundamental wave reactive powe

Use event triggers to analyze waveforms

An event trigger function is now available with Ver.3.00. Set triggers for up to four measurement items, such as RMS value and frequency, and record waveforms during an event for up to 100 seconds. If you need to record waveforms for more than 100 seconds, use the D/A output function (Motor Analysis & D/A output option) to observe and record waveforms with a recorder, simplifying the evaluation system. (It is not necessary to connect a differential probe or current probe to the recorder.)

than 100 seconds, use a recorder to record the D/A output waveform

Harmonic analysis and conductive noise evaluation

The PW6001 can perform IEC standard-based harmonic measurements that comply with IEC 61000-4-7. In wind power generation, where the generator hardware and grid operate at different frequencies, dual vector displays let you identify the tri-phase equilibrium at a glance. In addition, FFT analysis lets you to evaluate conductive noise generated by devices such as switching power supplies from 2 kHz to 150 kHz.

Measure output harmonics and noise through input waveform FFT analysis

Voltage frequency measurement fundamental accuracy of ± 0.01 Hz*

Perform frequency measurements required for each PCS test with world-class accuracy and stability. Achieve highly accurate frequency measurement values for a maximum of 6 ch (12 ch when there are two devices) while measuring each parameter at the same time.

* ±0.01 Hz fundamental accuracy is defined for cases where the data update is over 50 ms. Please contact us for even more precise frequency measurement

Measure the efficiency of wireless power transmission (WPT)

Accurate measurement, even of lowpower-factor power

In wireless power transfer / transmission (WPT), the inductance component of the energy transmit and receive elements lowers the power factor. The PW6001's current sensor phase shift function can be used to accurately measure high-frequency, low-power-factor power. In WPT measurement, it's extremely effective to combine the PW6001 with a high-bandwidth current measurement tool.

DC to 3.5 MHz (-3 dB) PW9100

Frequency band: DC to 4 MHz CT6904

Analyze transmission frequency harmonics

The PW6001's harmonic analysis function can analyze fundamental harmonics of up to 300 kHz at a bandwidth of up to 1.5 MHz. For example, with a circuit that uses an 85 kHz band switching frequency (a frequency that could be used in power transmission in electric vehicle applications) as the fundamental harmonic, the analyzer is capable of simultaneously measuring voltage, current, power, and phase angle for both receive and transmit through the 15th order.

Harmonic bar graph display

Harmonic two-circuit vector display

Automatic WPT TEST SYSTEM (For more information, please see the TS2400 product catalog.)

The WPT Evaluation System TS2400 is a system for automatically measuring the reproducible data that is required to evaluate WPT hardware by integrating measurement with an XYZ stage. A single software package provides control and automatic measurement functionality for instrument configuration, transmit and receive device positioning, and data collection. The results of analyses can be presented using a variety of bar graphs.

WPT evaluation supports the following types of measurement:

- Power transfer efficiency measurement (using the PW6001)
- Automatic coupling coefficient measurement
- Voltage/temperature logging
 Magnetic flux density logging

WPT TEST SYSTEM TS2400

Example of a 4D graph of transfer efficiency

Software

PC Communication Software – PW Communicator

PC Communicator is a free application that connects to the PW6001 via a communications interface (Ethernet, RS-232C, or GP-IB), making it easy to configure the instrument's settings and to monitor or save measured values and waveform data from a computer. The software can simultaneously connect to up to 8 Hioki power measuring instruments, including the PW6001, Power Analyzer PW3390, Power Meter PW3335, PW3336, and PW3337, and it can provide integrated control over multiple models. The software can also be used to simultaneously save measurement data on the computer and calculate efficiency between instruments.

LabVIEW driver and MATLAB toolkit

Hioki's LabVIEW driver and MATLAB toolkit can be used to build data collection and measurement systems. We also offer a number of sample programs to help you get started.
*LabVIEW is a registered trademark of National Instruments.
*MATLAB is a registered trademark of Mathworks, Inc.

to your PC

GENNECT One SF4000

The SF4000 is a free application software that lets you display and save measurement data on a PC in real-time after connecting the PW6001 to the PC via Ethernet.

The application is also compatible with other Hioki measuring instruments such as Memory HiLogger LR8450 and the Wireless Logging Station LR8410, letting you connect up to 15 units at the same time to monitor, graph and display lists of measured values from multiple instruments all at once and in real-time. This is especially effective for performing a total analysis of power, temperature and other factors of equipment.

Frequency measurement

Number of measurement channels	Max. 6 channels (f1 to f6), based on the number of input channels				
Measurement source	Select from U/I for each connection.				
Measurement method	Reciprocal method + zero-cross sampling value correction Calculated from the zero-cross point of waveforms after application of the zero- cross filter.				
Measurement range	0.1 Hz to 2 MHz (Display shows 0.00000 Hz or Hz if measurement is not possible.)				
Accuracy	±0.01Hz (Only when measuring 45-66 Hz with a minimum measurement interval of 50 ms and sine input of at least 50% relative to the voltage range when measuring the voltage frequency.) ±0.05% rdg ± 1 dgt. (other than the conditions mentioned above, when the sine wave is at least 30% relative to the measurement source's measurement range)				
Display format	0.10000 Hz to 9.99999 Hz, 9.9000 Hz to 99.9999 Hz, 99.000 Hz to 999.999 Hz, 0.99000 KHz to 9.99999 KHz, 9.9000 KHz to 99.9999 KHz, 99.000 kHz to 999.999 kHz, 0.99000 MHz to 2.00000 MHz				

Integration measurement

using an AO/DO sensor with a TF2W connection).	Select RMS or DC for each connection (DC mode can only be selected when using an AC/DC sensor with a 1P2W connection).					
Measurement parameters Current integration (Ih+, Ih-, Ih), active power integration (WP+, WP-, Ih+ and Ih- are measured only in DC mode. Only Ih is measured in R						
Digital calculation based on current and active power values	Digital calculation based on current and active power values					
Measurement method DC mode Every sampling interval, current values and instantant values are integrated separately for each polarity.	eous power					
RMS mode The current RMS value and active power value are integra measurement interval. Only active power is integrated se each polarity.						
Display resolution 999999 (6 digits + decimal point), starting from the resolution at v each range is f.s.	vhich 1% of					
Measurement range 0 to ±9999.99 TAh/TWh						
Integration time 10 sec. to 9999 hr. 59 min. 59 sec.						
Integration time accuracy ±0.02% rdg. (0°C to 40°C)						
Integration accuracy ±(current or active power accuracy) ±integration time accuracy						
Backup function None						

Harmonics measurement

Number of measurement channels	Max. 6 channels, based on the number of built-in channels
Synchronization source	Based on the synchronization source setting for each connection.
Measurement modes	Select from IEC standard mode or wideband mode (setting applies to all channels).
Measurement parameters	Harmonic voltage RMS value, harmonic voltage content ratio, harmonic voltage phase angle, harmonic current RMS value, harmonic current content ratio, harmonic current phase angle, harmonic active power, harmonic power content ratio, harmonic voltage/current phase difference, total voltage harmonic distortion, total current harmonic distortion, voltage unbalance ratio current unbalance ratio
FFT processing word length	32 bits
Antialiasing	Digital filter (automatically configured based on synchronization frequency)
Window function	Rectangular
Grouping	OFF / Type 1 (harmonic sub-group) / Type 2 (harmonic group)
THD calculation method	THD_F / THD_R (Setting applies to all connections.) Select calculation order from 2nd order to 100th order (however, limited to the maximum analysis order for each mode).

Waveform recording

Number of measurement channels	Voltage and current waveforms Max. 6 channels				
	(based on the number of installed channels) Motor waveforms * Max. 2 analog DC channels + max. 4 pulse channels				
Recording capacity	1 Moord va ((voltage + current) x max. 6 channels + motor waveforms) Fixed to 1 Mword when the number of channels is low. Motor waveforms: Motor analysis and D/A-equipped models only No memory allocation function				
Waveform resolution	16 bits (Voltage and current waveforms use the upper 16 bits of the 18-bit A/D.)				
Sampling speed	Voltage and current waveforms Always 5 MS/s Motor waveforms * Always 50 kS/s (analog DC) Motor pulse * Always 5 MS/s				
Compression ratio	111, 112, 115, 1110, 1120, 1150, 11100, 11200, 11500 (5 MSs, 2.5 MSs, 1 MSs, 500 KS), 520 KS/s, 100 KS/s, 50 KS/s, 25 KS/s, 10 KS/s) However, motor waveforms* are only compressed at 50 kS/s or less.				
Recording length	1 kWord / 5 kWord / 10 kWord / 50 kWord / 100 kWord / 500 kWord / 1 Mword				
Storage mode	Peak-to-peak compression or simple thinning				
Trigger mode	SINGLE or NORMAL (with forcible trigger setting) When FFT analysis is enabled in NORMAL mode, the instrument enters trigger standby and waits for FFT calculations to complete.				
Pre-trigger	0% to 100% of the recording length, in 10% steps				
Trigger source	Voltage and current waveform, waveform after voltage and current zero-cross filter, manual, motor waveform*, motor pulse*				
Trigger slope	Rising edge, falling edge				
Trigger level	±300% of the range for the waveform, in 0.1% steps				
Trigger detection method	 Level trigger / Event trigger (1) Level trigger Detects the trigger based on fluctuations in the level of the storage waveform. Trigger source: Voltage and current waveform, manual, motor waveform, motor current zero-cross filter, manual, motor waveform, motor bulse: (motor waveform and motor pulse: Motor analysis and D/A-equipped models only) Trigger level: ±300% of the range for the waveform, in 0.1% steps (2) Event trigger Detects the trigger based on fluctuations in the value of the measurement parameter selected for D/A output. Specifically, trigger detection conditions are set using OR and AND operations performed on the four events defined below. Note that the AND operations performed on the four events defined below. Note that the AND operations performed avalue (0.00000 to 999999T). Event: These condition definitions consist of a D/A output measurementer (D/A1S to D/A20), an inequality sign (< cr >), and a value (0.0000 to 999999T). EVm : 10 A in X:XXXX y (m: 1 to 4, n: 13 to 20, □: Inequality sign, X:XXXX: 6-digit constant, y: SI prefix) "Motor waveform and motor pulse: Motor Analysis and D/A-equipped models only 				
FFT analysi					
Measurement channel	Motor Waveform - Analyg DC Analysis performed only when FFT screen is displayed				
Calculation type	RMS spectrum				
Number of FFT points	1,000, 5,000, 10,000 or 50,000 points				
FFT processing word length					
Analysis position	Any desired position among the waveform record data				
Antialiasing	Automatic Digital Filter (during simple thinning mode) None (During Peak-Peak compression mode, use the Max value and perform FFT)				
Window function					
**maow function	Rectangular/Hanning/Flat-top Linked with compression ratio of waveform records. 2 MHz, 1 MHz, 400 kHz, 200 kHz, 200 kHz, 100 kHz, 40 kHz, 20 kHz, 10 kHz or 4 kHz / 20 kHz, 10 kHz, or 4kHz during analog DC input (Mentioned above frequency - frequency resolution) becomes the maximum analysis frequency.				
Max. analysis frequency					

mparmounou	r anotion loolatod inpat and olingio ond inpat				
Measurement parameters	Voltage, torque, rpm, frequency, slip, motor power				
Maximum input voltage	±20 V (analog DC and pulse operation)				
Additional conditions for guaranteed accuracy	Input: Terminal-to-ground voltage of 0 V, after zero-adjustment				

Motor Analysis (PW6001-11 to -16 only) 4 channels: CH A CH B CH C CH C CH D

Single, dual, or independent input

Function-isolated input and single-end input

Isolated BNC connectors 1 MΩ ±50 kΩ

(1) Analog DC input (CH A/CH B)

Input terminal profile Input resistance (DC)

Number of input channels Operating mode

Input method

(1) Analog DC Inpl	ut (CH A/CH B)				
Measurement range	±1 V / ±5 V / ±10 V				
Effective input range	1% to 110% f.s.				
Sampling	50 kHz, 16 bits				
Response speed	0.2 ms (when LPF is OFF)				
Measurement method	Simultaneous digital sampling, zero-cross synchronization calculation method (averaging between zero-crosses)				
Measurement accuracy	±0.05% rdg. ±0.05% f.s.				
Temperature coefficient	±0.03% f.s./°C				
Effects of common- mode voltage	±0.01% f.s. or less with 50 V applied between the input terminals and the enclosure (DC / 50 Hz / 60 Hz)				
LPF	OFF (20 kHz) / ON (1 kHz)				
Display range	From the range's zero-suppression range setting to ±150%				
Zero-adjustment	Voltage ±10% f.s., zero-correction of input offsets that are less				
(2) Frequency input	(CH A/CH B)				
Detection level	Low: 0.5 V or less; high: 2.0 V or more				
Measurement frequency band	0.1 Hz to 1 MHz (at 50% duty ratio)				
Minimum detection width	0.5 µs or more				
Measurement accuracy	±0.05% rdg. ±3 dgt.				
Display range	1.000 kHz to 500.000 kHz				
(3) Pulse input (CH	A / CH B / CH C / CH D)				
Detection level	Low: 0.5 V or less; high: 2.0 V or more				
Measurement frequency band	0.1 Hz to 1 MHz (at 50% duty ratio)				
Minimum detection width	0.5 µs or more				
Pulse filter	OFF / Weak / Strong (When using the weak setting, positive and negative pulses of less than 0.5 μ s are ignored. When using the strong setting, positive and negative pulses of 5 μ s are ignored.)				
Measurement accuracy	±0.05% rdg. ±3 dgt.				
Display range	0.1 Hz to 800.000 kHz				
Unit	Hz / r/min.				
Frequency division setting range	1~60000				
Rotation direction detection	Can be set in single mode (detected based on lead/lag of CH B and CH C).				
Mechanical angle origin detection	Can be set in single mode (CH B frequency division cleared at CH D rising edge).				

Analog DC input / Frequency input / Pulse input Analog DC input / Frequency input / Pulse input Pulse input Pulse input

D/A output (PW6001-11 to -16 only)

Number of output channels	20 channels				
Output terminal profile	D-sub 25-pin conn	nnector x 1			
Output details	- Switchable between waveform output and analog output (select from basic measurement parameters). - Waveform output is fixed to CH1 to CH12.				
D/A conversion resolution	16 bits (polarity + 15 bits)				
Output refresh rate	Analog output Waveform output	10 ms / 50 ms / 200 ms (based on data update rate for the selected parameter) 1 MHz			
Output voltage	Analog output Waveform output	±5 V DC f.s. (max. approx. ±12 V DC) Switchable between ±2 V f.s. and ±1 V f.s., crest factor of 2.5 or greater. Setting applies to all channels.			
Output resistance	100 Ω ±5 Ω				
	Analog output	Output measurement parameter measurement accuracy ±0.2% f.s. (DC level)			
Output accuracy	Waveform output	$ \begin{array}{l} \mbox{Measurement accuracy } \pm 0.5\% \mbox{ f.s. (at } \pm 2 \mbox{ V f.s.)} \\ \mbox{or } \pm 1.0\% \mbox{ f.s. (at } \pm 1 \mbox{ V f.s.)} \\ \mbox{(RMS value level, up to 50 \mbox{ kHz})} \end{array} $			
Temperature coefficient	±0.05% f.s./°C				

Display section

Display characters	English, Japanese, Chinese (simplified)				
Display	splay 9" WVGA TFT color LCD (800 × 480 dots) with an LED backlight and analog resistive touch panel				
Display value resolution	999999 count (including integration values)				
Display refresh rate	Measured values Waveforms	Approx. 200 ms (independent of internal data update rate) When using simple averaging, the data update rate varies based on the number of averaging iterations. Based on display settings			

External interface

USB flash drive	e interface				
Connector	USB Type A connector × 1				
Electrical specifications	USB 2.0 (high-speed)				
Power supplied	Max. 500 mA				
Supported USB flash drives	USB Mass Storage Class compatible				
	- Save/load settings files				
Recorded data	- Save measured values/automatic recorded data (CSV format)				
	 Copy measured values/recorded data (from internal memory) Save waveform data, save screenshots (compressed BMP format) 				
(2) LAN interface					
Connector	RJ-45 connector × 1				
Electrical specifications	IEEE 802.3 compliant				
Transmission method	10Base-T / 100Base-TX / 1000Base-T (automatic detection)				
Protocol	TCP/IP (with DHCP function)				
	HTTP server (remote operations)				
Functions	Dedicated port (data transferring, command control)				
(2) CR IR interfee	FTP server (file transferring)				
(3) GP-IB interfac					
Communication	IEEE 488.1 1987 compliant developed with reference to IEEE 488.2 1987				
method	Interface functions: SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT1, C0				
Addresses	00 to 30				
Functions	Command control				
(4) RS-232C inter	face				
Connector	D-sub 9-pin connector x 1, 9-pin power supply compatible, also used for external control				
Communication	RS-232C, EIA RS-232D, CCITT V.24, and JIS X5101 compliant				
method	Full duplex, start stop synchronization, data length of 8, no parity, 1 stop bit				
Flow control	Hardware flow control ON/OFF				
Communications speed	9,600 bps / 19,200 bps / 38,400 bps / 57,600 bps / 115,200 bps / 230,400 bps				
	Command control				
Functions	LR8410 Link supported (dedicated connector is required)				
	Used through exclusive switching with external control interface				
(5) External contro					
Connector	D-sub 9-pin connector x 1, 9-pin power supply compatible, also used for RS-232C				
Power supplied	OFF/ON (voltage of +5 V, max. 200 mA)				
Electrical specifications	0/5 V (2.5 V to 5 V) logic signals or contact signal with terminal shorted or open				
	Same operation as the [START/STOP] key or the [DATA RESET] key on the				
Functions	control panel				
	Used through exclusive switching with RS-232C				
(6) Two-instrumer	t synchronization interface				
Connector	SFP optical transceiver, Duplex-LC (2-wire LC)				
Optical signal	850 nm VCSEL, 1 Gbps				
Laser class	Class 1				
Laser class	50/125 µm multi-mode fiber equivalent, up to 500 m				
Fiber used	50/125 μ m multi-mode fiber equivalent, up to 500 m				

Auto-range function

Functions	The voltage and current ranges for each connection are automatically changed in response to the input.			
Operating mode	OFF/ON (selectable for each connection)			
Auto-range breadth	$ \begin{array}{llllllllllllllllllllllllllllllllllll$			

Time control function

Timer control	OFF, 10 sec. to 9999 hr. 59 min. 59 sec. (in 1 sec. steps)				
Actual time control	OFF, start time/stop time (in 1 min. steps)				
Intervals	OFF / 10 ms / 50 ms / 200 ms / 500 ms / 1 sec. / 5 sec. / 10 sec. / 15 sec. / 30 sec. 1 min / 5 min / 10 min / 15 min / 30 min / 60 min				

Hold function

Hold	Stops updating the display with all measured values and holds the value currently being displayed. Used exclusively with the peak hold function.
Peak hold	Updates the measured value display each time a new maximum value is set. Used exclusively with the hold function.

Calculation function

Functions	Selects the voltage and current values used to calculate apparent and reactive power and power factor.								
Operating mode	RMS/mean (Can be selected for each connection's voltage and current.)

Simplified Graph Function (1) D/A Monitor Graph

Functions	Graph measured values chosen as D/A output items in chronological order Illustrated waveforms are Peak-Peak compressed by setting time axis to data at data update rate, and data is not recorded.
Operations	Start and stop drawing with the RUN/STOP button Illustrate the displayed value during hold and peak hold Illustrated data is cleared when Clear button is pressed during changes in settings related to measured values of range and D/A output items
Number of illustrated items	Maximum of 8 items
Illustrated items	Operates simultaneously with D/A output items from CH13 to CH20 settings
Time axis	10 ms/dot to 48 min/dot (Cannot be selected below the data update rate)
Vertical axis	Autoscaling (operates to fit data on screen within screen display range with time axis) Manual (user sets displayed maximum value and minimum value)
(2) X-Y Plot	
	Select horizontal and vertical axis items from fundamental measurement items and display X-Y graph

Functions	Dot illustrations are done at data update rate, and data is not recorded
	Illustration data can be cleared / a total of two combinations of graphs can be displayed: X1-Y1 or X2-Y2
	Gauge display, displayed max value and min value settings are allowed
	X1, Y1, X2, and Y2 operate in synchronization with D/A output item settings for CH13, 14, 15, and 16 respectively

Automatic save function

Functions	Saves the specified measured values in effect for each interval.	
Save destination	OFF / Internal memory / USB flash drive	
Saved parameters	User-selected from all measured values, including harmonic measured values	
Maximum amount of saved data	Internal memory 64 MB (data for approx. 1800 measurements) USB flash drive Approx. 100 MB per file (automatically segmented) × 20 files	
Data format	CSV file format	

Manual save function (1) Measurement data

Functions	The [SAVE] key saves specified measured values at the time it is pressed. Comment text can be entered for each saved data point, up to a maximum of 20 alphanumeric characters. *The manual save function for measurement data cannot be used while automatic save is in progress.	
Save destination	USB flash drive	
Saved parameters	User-selected from all measured values, including harmonic measured values	
Data format	CSV file format	
(2) Waveform da	ta	
	(Within touch papel) Use Save Waveforms Button to save waveform data during	

Functions	(Within touch panel) Use Save Waveforms Button to save waveform data during that session Input comments for each set of saved data *Cannot be operated when waveform data is invalid during storage and automatic saving	
Save destination	USB flash drive - Assign destinations for saved data	
Comment entry	OFF/ON - up to 40 letters/symbols	
Data format	CSV file format (read-only attribute included), binary file format (BIN format)	

(3) Screenshots

Functions	The [COPY] key saves a screenshot to the save destination. *This function can be used at an interval of 1 sec or more while automatic saving is in progress.
Save destination	USB flash drive
Comment entry	OFF / Text / Handwritten When set to [Text], up to 40 alphanumeric characters When set to [Handwritten], hand-drawn images are pasted to the screen.
Data format	Compressed BMP

(4) Settings data

Functions	Saves settings information to the save destination as a settings file via functionality provided on the File screen. In addition, previously saved settings files can be loaded and their settings restored on the File screen. However, language and communications settings are not saved.
Save destination	USB flash drive
(5) FFT data	

Functions	(Within touch panel) Use Save FFT Spectrum button to save waveform da during that session Input comments for each set of saved data "Cannot be operated when waveform data is invalid during storage and automatic savin	
Save destination	USB flash drive - Assign destinations for saved data	
Comment entry	OFF/ON - up to 40 letters/symbols	
Data format	CSV file format (with read-only attribute set)	

Two-instrument synchronization function

Functions	Sends data from the connected slave instrument to the master instrument, which performs calculations and displays the results. In numerical synchronization mode, the master instrument operates as a power meter with up to 12 channels. In waveform synchronization mode, the master instrument operates while synchronizing up to three channels from the slave instrument at the waveform level.	
Operating mode	OFF / Numerical synchronization / Waveform synchronization Numerical synchronization cannot be selected when the data update rate is 10 ms. Waveform synchronization operates only when master device has more than 3 channels	
Synchronized items		Data update timing, start/stop/data reset Voltage/current sampling timing
Synchronization delay	Numerical synchronization mode Waveform synchronization mode	
Transfer items	Numerical synchronization mode	Basic measurement parameters for up to six channels (including motor data)
	Waveform synchronization mode	Voltage/current sampling waveforms for up to three channels (not including motor data). However, the maximum number of channels is limited to a total of six, including the master instrument's channels.

General Specifications

Operating environment	Indoors at an elevation of up to 2000 m in a Pollution Level 2 environment	
Storage temperature and humidity	-10°C to 50°C, 80% RH or less (no condensation)	
Operating temperature and humidity	0°C to 40°C, 80% RH or less (no condensation)	
Dielectric strength	50 Hz/60 Hz 5.4 kV rms AC for 1 min. (sensed current of 1 mA) Between voltage input terminals and instrument enclosure, and between current sensor input terminals and interfaces 1 kV rms AC for 1 min. (sensed current of 3 mA) Between motor input terminals (Ch. A, Ch. B, Ch. C, and Ch. D) and the instrument enclosure	
Standards	Safety EN61010 EMC EN61326 Class A	
Rated supply voltage	100 V AC to 240 V AC, 50 Hz/ 60 Hz	
Maximum rated power	200 VA	
External dimensions	Approx. 430 mm (16.93 in)W × 177 mm (6.97 in)H × 450 mm (17.72 in)D (excluding protruding parts)	
Mass	Approx. 14 kg (49.4 oz) (PW6001-16)	
Backup battery life	Approx. 10 years (reference value at 23°C) (lithium battery that stores time and setting conditions)	
Product warranty period	3 year	
Guaranteed accuracy period	6 months (1-year accuracy = 6-month accuracy × 1.5)	
Post-adjustment accuracy guaranteed period	6 months	
Accuracy guarantee conditions	Accuracy guarantee temperature and humidity range: 23°C ±3°C, 80% RH or less Warm-up time: 30 min. or more	
Accessories	Instruction manual x 1, power cord x 1, D-sub 25-pin connector × 1 (PW6001-1x only)	

Other functions

Clock function	Auto-calendar, automatic leap year detection, 24-hour clock	
Actual time accuracy	When the instrument is on, ± 100 ppm; when the instrument is off, within ± 3 sec./day (25°C)	
Sensor identification	Current sensors connected to Probe1 are automatically detected.	
Zero-adjustment function	After the AC/DC current sensor's DEMAG signal is sent, zero-correction of the voltage and current input offsets is performed.	
Touch screen correction	Position calibration is performed for the touch screen.	
Key lock	While the key lock is engaged, the key lock icon is displayed on the screen.	

Current sensors

High-accuracy sensors: direct connection type (connect to Probe1 input terminal)

The newly developed DCCT method provides world-leading measurement bands and accuracy at a 50 A rating. Delivering a direct-coupled type current testing tool that brings out the PW6001 POWER ANALYZER's maximum potential. (A 5 A-rated version is also available. Contact us for more information.)

	AC/DC CURRENT BOX PW9100-03	AC/DC CURRENT BOX PW9100-04
External Appearance		mmmm m
Number of input channels	3ch	4 ch
Rated primary current	50 A A	AC/DC
Frequency band	DC to 3.5 M	/Hz (-3 dB)
Measurement terminals	Terminal block (with sa	fety cover), M6 screws
Basic accuracy	±0.02% rdg. ±0.005% f.s. (amplitude), ±0.1 ° (phase) (At 45 ≤ f ≤ 65 Hz) ±0.02% rdg. ±0.007% f.s. (amplitude), (At DC)	
Frequency response (Amplitude)	to 45 Hz: ±0.1% rdg. ±0.02% f.s. to 1 kHz: ±0.1% rdg. ±0.01% f.s. to 50 kHz: ±1% rdg. ±0.02% f.s. to 100 kHz: ±1% rdg. ±0.05% f.s. to 1 MHz: ±10% rdg. ±0.05% f.s. 3.5 MHz: -3 dB Typical	
Input resistance	1.5 mΩ or less (50 Hz/60 Hz)	
Operating temperature range	Temperature: 0°C to 40°C (32°F to 104°F), Humidity: 80% R.H. or less (no condensation)	
Effects of common-mode voltage (CMRR)	50 Hz/60 Hz: 120 dB or greater, 100 kHz: 120 dB or greater (Effect on output voltage/common-mode voltage)	
Maximum voltage to ground	1000 V (measurement category II), 600 V (measurement category III), anticipated transient overvoltage: 6000 V	
Dimensions	430 mm (16.93 in) W × 88 mm (3.46 in) H × 260 mm (10.24 in) D, Cable length: 0.8 m (2.62 ft)	
Mass	3.7 kg (130.5 oz)	4.3 kg (151.7 oz)
Derating Characteristics	Guaranteediac	00/07/09/4 00/07/05/07- 00/07/07/09 00/07/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/07/07/07 00/00000000

measurements. Use as an alternative to existing direct-input power meters. Use two PW9100-03 devices (the 3 ch models) for 6-channel measurements

Wiring connection example 2 -Introducing a new and innovative measuring method

Shorten the wiring for current measurement by installing the PW9100 close to the measurement target. This will also keep the effects of wiring resistance, capacity coupling and other objective factors on the measured values to a minimum.

All new High-accuracy sensors: pull-through type (connect to Probe1 input terminal) current sensor

	AC/DC CURRENT SENSOR CT6904

Frequency [Hz]

The CT6904 delivers a measurement band that is 40x greater than the previous model along with high accuracy and a 500 A rating, making it a world-class current sensor that provides the ultimate level of performance when used in conjunction with the Power Analyzer PW6001. (The sensor is also available in an 800 A rated version. Please contact Hioki for details.)

4 MHz Measurement Range, 40× Conventional Models

Newly developed opposed split coil technology is used in winding (CT) areas, achieving a wide measurement range from DC to 4 MHz.

High Noise Resistance Common-Mode Rejection Ratio (CMRR) of 120 dB or More (100 kHz)

Completely shielding the sensor's opposed split coil with a solid shield featuring a proprietary shape lets the sensor deliver high accuracy measurement that is not affected by nearby voltages.

High-accuracy sensors: pull-through type (connect to Probe1 input terminal)
