Automated Optical Inspection Device

i22XDA-300

i22X-200

i22X-500

i22X-300

Automate your post-process visual inspection

With fine process manufacturing, on-site inspection with the naked eye alone is not enough for effective traceability; defects can slip through much too easily. Inspection after product casing creates workpiece setting space and height clearance problems. Customizing a robot and camera on your own to do inspections is very time consuming.

The i22X Series Automated Optical Inspection device solves these problems.

Inspection Items and Lighting Types

DL Lighting

White Light +
Side Red Light +
Diffuse On-Axis LED

Various inspection capabilities, including component inspection under white light, text or solder inspection under side red light, and scratch and dent inspections under DOAL.

Missing Screws

Missing Parts

Laser Printed Text

Dents

Cracks

Scratches

Scratch
Inspection
Example

White Light

Diffuse
On-Axis LED

ML Lighting

RGB +
Diffuse On-Axis LED

Ideal for solder inspection, capturing solder fillet shape in color under layered RGB light.

Insufficient or
No Solder

Excess solder

Bridge

Blowhole

Missing pin

Solder ball

White Lighting

Combine white light with a macro lens for wide angle view inspection; ideal for simple inspections including text, color difference, wrong component and more.

White Light

Wrong Component

LED Status Check

Text

(Optional OCR also available)

UV Lighting

Specialized lighting for inspecting dispensing coverage of fluorescent moisture-proof coating. The white light inspects components and recognizes fiducials; the UV light inspects the coating itself.

White Light

Switchable

UV Light

- Check the dispensing coverage and the surrounding area for splashes

Dispensing Coverage

Splash

Through-hole

Connector

Inspection

Polarity

i22XDA-300

Equipped with a two-angle camera and rotary table to combine multi-faceted inspection with the conventional vertical inspection.

Main Camera

Angular Camera

Assembled Product

Angular Camera+ Dedicated Lighting

White Light +
Side White Light +
Diffuse On-Axis LED

Automatic wide view inspection (approx. 30×30mm) with the camera on an angle. Special lighting for shadow free inspection.

Rotary Table

360° horizontal rotation for inspection from all directions (-180°to 180°). Easy to operate, just select the rotation angle with a click of your mouse!

Inspection Examples

DIP Switch Check

Lateral Character Inspection

Lateral Barcode Reading

Screw Tightening Check

Cable Color Inspection

Cable Insertion Status

No Teaching Pendant Needed

Intuitive Operation

Easy operation of 3 axes for XYZ movement, just click and drag your mouse!
The i22XDA-300 features a rotary table for a total of 4 axes (XYZR).

3-Axes drive for XYZ movement

Z-Axis as Standard Equipment

Vertical Axis Inspects 3D Objects

Adjustable focus for optimal image acquisition.

Z-Axis Operating Range	i22X-200	50mm
	i22X-300	100mm
	i22X-500	150mm
	i22XDA-300	50mm

USER I/O Interface

Equipped with a 37-pin D-sub Connector

8 Input and 8 Output points available.

Input inspection start and other operating commands, and output OK (Pass)/NG (Fail) inspection result signals. The Switch Box is unavailable when using the USER I/O.

Flexible Fixture Installation

Easily install a workpiece fixture on the Y-Axis* table.

Please note the fixture is not included. Please prepare a fixture at the end-user side.

● Fixture Examples

Base Plate & L Brackets for Top Clamping

PCB Rail Fixture

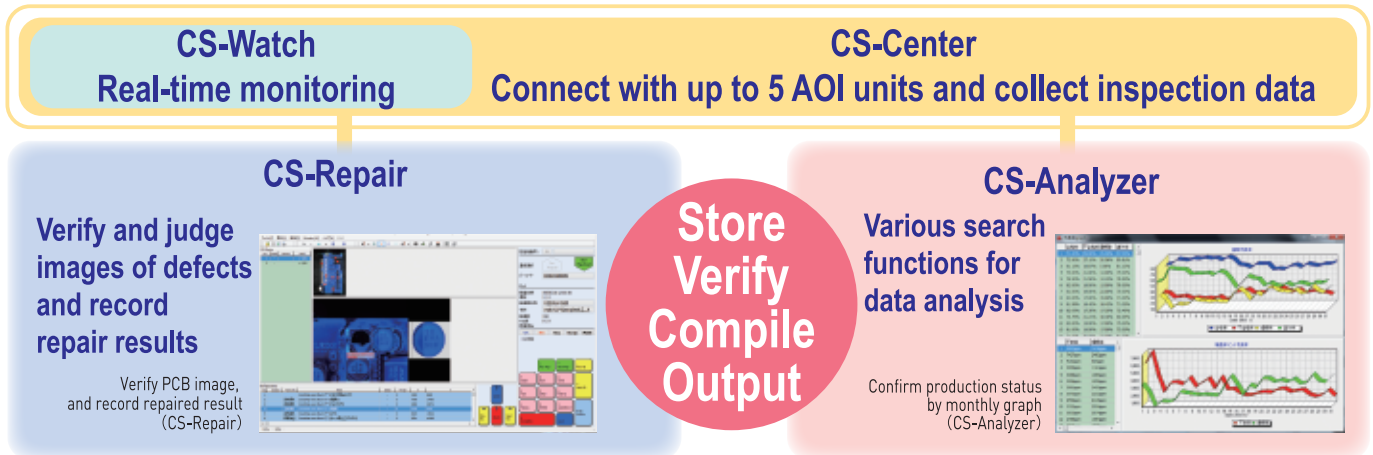

*With the i22X AOI, the Y-Axis controls the workpiece position, the X-Axis controls the camera position and the Z-Axis controls the camera height.

Catch System (optional)

Establish inspection result traceability

Dedicated PC software stores acquired inspection result data in a database, and verifies images. Compile and analyze cumulative data to grasp the operational status for each AOI unit and Improve product quality by reducing defects. The Catch System collects all available information From each AOI unit to ensure reliable production traceability.

*System requirements: A PC with a Windows® MS or Windows® 7~10 OS.

Barcode Reader Function

- Send inspection results to the Catch System
- Link inspection results to workpiece serial numbers
- Easily switch among different barcode program types

Type of 2D Code	22X software support (Standard)	Smart Barcode Add-In (Optional)
QR code(Model 2)	○	○
Data matrix(Conform to ECC200)	○	○
Code 39	○	○
Code 128	○	○
interleaved 2 of 5	×	○
Micro QR	×	○

Read the barcode and instantly access the inspection data and/or image for that workpiece.

Offline Teaching (optional)

Create inspection data offline without stopping the AOI's operation

Make inspection data offline on the same monitor screen as the AOI device. Save images of NG (Fail) results and use OLT to perform debugging. OLT is also useful for staff training.

*System requirements: an additional MacOS® computer with the same specifications as the AOI computer.

OLT
(Offline Teaching)

*1 Dimensions exclude movable duct.

*2 Width (W) includes handling bar.

*3 For the i22X-200, the lowest point of focus is H30mm. Please elevate the workpiece if the inspection target height is lower than 30mm.

*4 Total weight for fixture and workpiece combined.

*5 The i22XDA-300 is not CE declared for import to the European Economic Area.

For Your Safety

- Specifications may change without notice to improve product quality.
- To ensure safe and correct usage of this product, please read the attached operation manual before use.
- Please also review the operation manual carefully before executing any operation, regardless of whether the device is running or on standby.
