

This compact plug-in converter receives a pulse train signal and converts into analog signal that is proportional to its frequency, and provides two isolated outputs.

It converts measurement signals detected in the form of pulses (e.g., those for flow rate, revolution, and speed) into optimum DC signals for measuring and control systems.

Features

- ★ Generates low-ripple signals with excellent linearity and repeatability
- ★ Dielectric strength of 2000Vac between input, output and power supply
- ★ Both AC and DC power supply are available
- ★ Easy to maintain by plug-in structure
- ★ RoHS compliant
